

David Olatunji

Technical Product Manager | Product Owner | AI Products & Platforms

Lagos, Nigeria | avi@nexprove.com | +234 817 045 8819 | avi.nexprove.com | github.com/avioflagos

PROFESSIONAL SUMMARY

Technical Product Manager and Product Owner with 4+ years taking AI, SaaS, fintech and marketplace products from ambiguous problem to shipped release. I own the full arc: discovery, PRDs and technical specifications, backlog and acceptance criteria, release planning. I also build working prototypes, so a contested spec gets settled with something clickable instead of another document. Recent work is AI-native: agent orchestration, an MCP-compatible capability registry, and LLM-driven workflows shipped to real users.

CORE COMPETENCIES

Product Management & Ownership: Product strategy · Discovery · Roadmapping · PRDs, FRDs & TRDs · MVP definition · Prioritisation · Release planning · Backlog definition · User stories & acceptance criteria · Definition of done · Agile / Scrum · Stakeholder management

Technical Product: API requirements · System architecture · Database design · Third-party & payment integrations · Cloud infrastructure · Technical specifications

AI & Automation: LLM applications · AI agents · MCP · Agent orchestration · Retrieval · AI-assisted workflows · Speech-to-text & text-to-speech

UX & Design: User research · User flows · Information architecture · Wireframing · Prototyping · Usability testing · Design systems

PROFESSIONAL EXPERIENCE

Technical Product Manager & Product Owner

2024 - Present

Ellum AI · Remote · AI SaaS

- Own the product end to end for an AI marketing platform, from the original pilot through a V2 architecture scoped across 11 milestones and 7 epics.
- Re-architected the content engine from single-shot prompting to an orchestrator that routes work to specialised agents, skills and tools, so new capabilities ship without changes to the core platform.
- Defined an MCP-compatible capability registry (DeepEllum) covering agents, skills, tools, CLIs and integrations, with subscription-aware installation so entitlements map to what customers pay for.
- Specified an AI-enabled onboarding flow capturing brand identity, goals and audience as structured context for every downstream agent, plus a social publishing rewrite across LinkedIn, TikTok and YouTube using per-user resource allocation to avoid shared API rate limits.
- Ran the pilot with ~50 users, converted feedback into a prioritised roadmap, and produced the investor-ready materials used in fundraising conversations.
- Lead a distributed team of 8 across backend, frontend, design, QA and marketing on a weekly sprint and standup cadence.

Product Coordinator & PM Mentor

Jul 2023 - Apr 2026

HNG · Remote · Volunteer

- Led product coordination and mentorship across 30,000+ participants annually in Africa's largest tech internship programme, enforcing agile standards and improving delivery efficiency by ~50%.
- Currently restructuring the product-education model around AI-native product engineering, defining an AI Product Engineer curriculum that spans frontend, backend, DevOps, AI-assisted development and post-launch maintenance.
- Facilitated strategy co-creation with senior stakeholders, driving organisational alignment.
- Directed large-scale community events end to end, including the annual HNG Mentors Hangout and finalist meetups.

Technical Product Manager & Product Owner

Jun 2022 - Dec 2025

Nexprove Agency · Remote · Full-time

- Led 6+ client products across AI, fintech, real estate and Web3 from discovery to MVP, owning roadmaps, requirements and go-to-market.
- Introduced product processes and design systems that cut design iteration time by ~40%, improving delivery velocity across engagements.

- Translated client business goals into PRDs, functional and technical requirements, user stories and acceptance criteria that engineering could execute without rework.
- Scoped a cross-border remittance platform for African corridors covering multi-currency wallets, partner-first PSP routing with fallback, a double-entry ledger, tiered KYC and AML screening, evaluating architecture against speed to market, scalability and cost.
- Built stakeholder relationships that influenced company-level strategy, and mentored junior PMs and designers.

Selected projects

Ellum AI (AI SaaS, 2024) AI-driven workflow and automation platform; ran the ~50-user pilot and produced the investor materials.

Vettika (AI recruitment, 2026 · vettika.com) Voice AI that runs first-round interviews, scores against a rubric and returns the transcript to the candidate.

BlueTide (Industrial / sustainability, 2025 · bluetide.com) Digital product and web platform for a North American re-refiner producing sustainable base and process oils.

Breadcrumbs Trail (Consumer mobile, 2025 · breadcrumbstrail.com) iOS walking-safety app that records your route and guides you back with voice navigation, safety timers and SOS.

Simoles (Web3, 2024) Directed MVP delivery for messaging DApps and a DEX trading platform built for community adoption.

Product Manager

Feb 2025 - May 2025

Rides.co · San Francisco · Remote contract

- Led a redesign of onboarding around AI-driven knowledge search, cutting completion time by 60 to 70% and increasing retention by ~25%.
- Partnered with stakeholders to define the product roadmap and release plans, aligning business goals with development priorities.
- Translated roadmap initiatives into actionable engineering tasks, improving delivery speed and transparency.

Product Manager & Designer

Feb 2023 - Dec 2024

EVUSA · Texas · Remote contract

- Translated product vision into design prototypes for the engineering team.
- Defined onboarding strategies and product-market-fit recommendations that positioned the product for B2B partnerships.
- Advised founders on scaling strategy and handled recruitment for technical teams.

Product Manager & UI/UX Designer

2022 - 2023

Zuri · Reposebay HR · Landpropy · Remote · Internship & volunteer

- Contributed to SaaS and marketplace MVPs through user research, UX design and agile delivery, and implemented analytics practices enabling structured data collection for product decisions.
- Developed scalable Figma design systems, reducing handoff friction for developers.

TECHNICAL SKILLS

Product & Delivery: Jira · Linear · ClickUp · Notion · GitHub Issues · Agile / Scrum · Roadmapping · Backlog management

Design: Figma · Canva · PenPot · Wireframing · Prototyping · Design systems

Frontend: React · Next.js · TypeScript · Tailwind CSS

Backend & Data: Python · FastAPI · Node.js · REST APIs · PostgreSQL · MongoDB · Firebase

Infrastructure: Docker · AWS · Vercel · Git · Swagger · Postman · CI/CD

AI: LLM applications · AI agents · MCP · Agent orchestration · Retrieval · Browser automation · Speech-to-text / text-to-speech

EDUCATION

MIVA University, Computer Science · **Yaba College of Technology**, Electrical Engineering
